# C and C++

Instructors: Abir Das and Sourangshu Bhattacharya

Department of Computer Science and Engineering  
Indian Institute of Technology, Kharagpur

*{abir, sourangshu}@cse.iitkgp.ac.in*

Slides heavily lifted from Programming in Modern C++ NPTEL Course  
by Prof. Partha Pratim Das

# Module Objectives

## C and C++

Instructors: Abir  
Das and  
Sourangshu  
Bhattacharya

Arrays and  
vectors

Strings

Sorting

- Understand differences between C and C++ programs
- Appreciate the ease of programming in C++

*Note that here we are trying to understand the difference between the C-style of programming with the C++-style of programming, and how the C++ features make programming easier and less error-prone compared to its C equivalent. This is different from the compatibility issues between the two languages.*

# Program: Hello World

## C and C++

Sourangshu  
Bhattacharya

Arrays and  
vectors

Strings

Sorting

### C Program

```
// HelloWorld.c
#include <stdio.h>

int main() {
    printf("Hello World in C");
    printf("\n");

    return 0;
}
```

#### Hello World in C

- IO Header is `stdio.h`
- `printf` to *print* to console
- Console is `stdout` file
- `printf` is a variadic function
- `\n` to go to the new line
- `\n` is escaped newline character

### C++ Program

```
// HelloWorld.cpp
#include <iostream>

int main() {
    std::cout << "Hello World in C++";
    std::cout << std::endl;

    return 0;
}
```

#### Hello World in C++

- IO Header is `iostream`
- `operator<<` to *stream* to console
- Console is `std::cout ostream` (in `std` namespace)
- `operator<<` is a binary operator
- `std::endl` (in `std` namespace) to go to the new line
- `std::endl` is stream manipulator (newline) functor

# Program: Add Two Numbers and Handling IO

### C Program

```
// Add_Num.c
#include <stdio.h>
int main() { int a, b; int sum;

    printf("Input two numbers:\n");
    scanf("%d%d", &a, &b);

    sum = a + b;

    printf("Sum of %d and %d", a, b);
    printf(" is: %d\n", sum);
}
```

Input two numbers:  
3 4  
Sum of 3 and 4 is: 7

- `scanf` to `scan` (`read`) from console
- Console is `stdin` file
- `scanf` is a variadic function
- Addresses of `a` and `b` needed in `scanf`
- All variables `a`, `b` & `sum` declared first (K&R)
- Formatting (`%d`) needed for variables

### C++ Program

```
// Add_Num_c++.cpp
#include <iostream>
int main() { int a, b;

    std::cout << "Input two numbers:\n";
    std::cin >> a >> b;

    int sum = a + b; // Declaration of sum

    std::cout << "Sum of " << a << " and " << b <<
        " is: " << sum << std::endl;
}
```

Input two numbers:  
3 4  
Sum of 3 and 4 is: 7

- `operator>>` to `stream` from console
- Console is `std::cin istream` (in `std` namespace)
- `operator>>` is a binary operator
- `a` and `b` can be directly used in `operator>>` operator
- `sum` may be declared when needed. Allowed from C89 too
- Formatting is derived from type (`int`) of variables

# Program: Square Root of a number

## C and C++

Instructors: Abir  
Das and  
Sourangshu  
Bhattacharya

Arrays and  
vectors

Strings

Sorting

### C Program

```
// Sqrt.c
#include <stdio.h>
#include <math.h>

int main() { double x, sqrt_x;
    printf("Input number:\n");
    scanf("%lf", &x);

    sqrt_x = sqrt(x);

    printf("Sq. Root of %lf is:", x);
    printf(" %lf\n", sqrt_x);
}
```

Input number:

2

Square Root of 2.000000 is: 1.414214

- Math Header is `math.h` (C Standard Library)
- Formatting (`%lf`) needed for variables
- `sqrt` function from C Standard Library
- Default precision in print is 6

### C++ Program

```
// Sqrt_c++.cpp
#include <iostream>
#include <cmath>
using namespace std;

int main() { double x;
    cout << "Input number:" << endl;
    cin >> x;

    double sqrt_x = sqrt(x);

    cout << "Sq. Root of " << x;
    cout << " is: " << sqrt_x << endl;
}
```

Input number:

2

Square Root of 2 is: 1.41421

- Math Header is `cmath` (C Standard Library in C++)
- Formatting is derived from type (`double`) of variables
- `sqrt` function from C Standard Library
- Default precision in print is 5 (*different*)

```

23 34 65 74

- No difference between arrays in C and C++

# Arbitrary Size Array

C and C++

Instructors: Abir  
Das and  
Sourangshu  
Bhattacharya

Arrays and  
vectors

Strings

Sorting

This can be implemented in C (C++) in the following ways:

- **Case 1:** Declaring a large array with size greater than the size given by users in all (most) of the cases
  - Hard-code the maximum size in code
  - Declare a manifest constant for the maximum size
- **Case 2:** Using `malloc` (`new[]`) to dynamically allocate space at run-time for the array

# Program: Fixed large array / vector

## C and C++

Instructors: Abir  
Das and  
Sourangshu  
Bhattacharya

Arrays and  
vectors

Strings

Sorting

### C (array & constant)

```
// Array_Macro_c.c
#include <stdio.h>
#include <stdlib.h>

#define MAX 100

int main() { int arr[MAX];
    printf("Enter no. of elements: ");
    int count, sum = 0, i;
    scanf("%d", &count);
    for(i = 0; i < count; i++) {
        arr[i] = i; sum += arr[i];
    }
    printf("Array Sum: %d", sum);
}
```

Enter no. of elements: 10  
Array Sum: 45

- **MAX** is the declared size of array
- No header needed
- **arr** declared as **int []**

### C++ (vector & constant)

```
// Array_Macro_c++.cpp
#include <iostream>
#include <vector>
using namespace std;
#define MAX 100

int main() { vector<int> arr(MAX); // MAX is within ()
    cout << "Enter the no. of elements: ";
    int count, sum = 0;
    cin >> count;
    for(int i = 0; i < count; i++) {
        arr[i] = i; sum += arr[i];
    }
    cout << "Array Sum: " << sum << endl;
}
```

Enter no. of elements: 10  
Array Sum: 45

- **MAX** is the declared size of vector
- Header **vector** included
- **arr** declared as **vector<int>**

# Program: Dynamically managed array size

C and C++

Instructors: Abir  
Das and  
Sourangshu  
Bhattacharya

Arrays and  
vectors

Strings

Sorting

## C Program

```
// Array_Malloc.c
#include <stdio.h>
#include <stdlib.h>

int main() { printf("Enter no. of elements ");
    int count, sum = 0, i;
    scanf("%d", &count);

    int *arr = (int*) malloc
        (sizeof(int)*count);
    for(i = 0; i < count; i++) {
        arr[i] = i; sum += arr[i];
    }
    printf("Array Sum:%d ", sum);
}
```

Enter no. of elements: 10  
Array Sum: 45

- **malloc** allocates space using **sizeof**

## C++ Program

```
// Array_Resize_c++.cpp
#include <iostream>
#include <vector>
using namespace std;

int main() { cout << "Enter the no. of elements: ";
    int count, sum=0;
    cin >> count;

    vector<int> arr;    // Default size
    arr.resize(count); // Set resize
    for(int i = 0; i < arr.size(); i++) {
        arr[i] = i; sum += arr[i];
    }
    cout << "Array Sum: " << sum << endl;
}
```

Enter no. of elements: 10  
Array Sum: 45

- **resize** fixes vector size at run-time

# Strings in C and C++

## C and C++

Instructors: Abir  
Das and  
Sourangshu  
Bhattacharya

Arrays and  
vectors

Strings

Sorting

## String manipulations in C and C++:

- C-String and `string.h` library
  - C-String is an array of `char` terminated by `NULL`
  - C-String is supported by functions in `string.h` in C standard library
- `string` type in C++ standard library
  - `string` is a type
  - With operators (like `+` for concatenation) it behaves like a built-in type
  - In addition, for functions from C Standard Library `string.h` can be used in C++ as `cstring` in `std` namespace

# Program: Concatenation of Strings

C and C++

Instructors: Abir  
Das and  
Sourangshu  
Bhattacharya

Arrays and  
vectors

Strings

Sorting

## C Program

```
// Add_strings.c
#include <stdio.h>
#include <string.h>

int main() { char str1[] = {'H','E','L','L','O',' ',' ','\0'};
char str2[] = "WORLD";
char str[20];
strcpy(str, str1);
strcat(str, str2);

printf("%s\n", str);
}
```

HELLO WORLD

- Need header `string.h`
- *C-String is an array of characters*
- String concatenation done with `strcat` function
- Need a copy into `str`
- `str` must be large to fit the result

## C++ Program

```
// Add_strings_c++.cpp
#include <iostream>
#include <string>
using namespace std;

int main(void) { string str1 = "HELLO ";
string str2 = "WORLD";

string str = str1 + str2;

cout << str;
}
```

HELLO WORLD

- Need header `string`
- `string` is a data-type in C++ standard library
- Strings are concatenated like addition of `int`

# More Operations on Strings

C and C++

Instructors: Abir  
Das and  
Sourangshu  
Bhattacharya

Arrays and  
vectors

Strings

Sorting

Further,

- `operator=` can be used on strings in place of `strcpy` function in C
- `operator<=`, `operator<`, `operator>=`, `operator>` operators can be used on strings in place of `strcmp` function in C

# Program: Bubble Sort

## C and C++

Instructors: Abir  
Das and

Bhattacharya

Arrays and  
vectors

Strings

Sorting

### C Program

```
#include <stdio.h>

int main() { int data[] = {32, 71, 12, 45, 26};
    int i, step, n = 5, temp;
    for(step = 0; step < n - 1; ++step)
        for(i = 0; i < n-step-1; ++i) {
            if(data[i] > data[i+1]) {
                temp = data[i];
                data[i] = data[i+1];
                data[i+1] = temp;
            }
        }

    for(i = 0; i < n; ++i)
        printf("%d ", data[i]);
}
```

12 26 32 45 71

### C++ Program

```
#include <iostream>
using namespace std;
int main() { int data[] = {32, 71, 12, 45, 26};
    int n = 5, temp;
    for(int step = 0; step < n - 1; ++step)
        for(int i = 0; i < n-step-1; ++i) {
            if (data[i] > data[i+1]) {
                temp = data[i];
                data[i] = data[i+1];
                data[i+1] = temp;
            }
        }

    for(int i = 0; i < n; ++i)
        cout << data[i] << " ";
}
```

12 26 32 45 71

- Implementation is same in both C and C++ apart from differences in header files

# Program 04.02: Using sort from standard library

C and C++

Instructors: Abir  
Das and  
Sourangshu  
Bhattacharya

Arrays and  
vectors

Strings

Sorting

## C Program (Desc order)

```
#include <stdio.h>
#include <stdlib.h> // qsort function

// compare Function Pointer
int compare(
    const void *a, const void *b) { // Type unsafe
    return (*(int*)a < *(int*)b); // Cast needed
}

int main () { int data[] = {32, 71, 12, 45, 26};
    // Start ptr., # elements, size, func. ptr.

    qsort(data, 5, sizeof(int), compare);

    for(int i = 0; i < 5; i++)
        printf ("%d ", data[i]);
}
```

71 45 32 26 12

- `sizeof(int)` and `compare` function passed to `qsort`
- `compare` function is type unsafe & needs complicated cast

## C++ Program (Desc order)

```
#include <iostream>
#include <algorithm> // sort function
using namespace std;
// compare Function Pointer
bool compare(
    int i, int j) { // Type safe
    return (i > j); // No cast needed
}

int main() { int data[] = {32, 71, 12, 45, 26};
    // Start ptr., end ptr., func. ptr.

    sort(data, data+5, compare);

    for (int i = 0; i < 5; i++)
        cout << data[i] << " ";
}
```

71 45 32 26 12

- Only `compare` passed to `sort`. No size is needed
- Only Size is inferred from the type `int` of `data`
- `compare` function is type safe & simple with no cast
